(54) Title: **ELECTRIC MACHINE IMPROVEMENT**

(57) Abstract: An electric machine which includes a magnetically inducible core (60), at least three elongated first, second and third current carrying conductors (64-66) passing through a respective aperture (68) through the core, a first end (15, 69) of the first conductor and a first end of the second conductor are electrically connected by a first bridging member (8) located on a first side of the core, a second end of the second conductor and a second end of the third conductor are electrically connected by a second bridging member (8) located on a second side of the core (figures 4, 5).
